Project Proposal Year IV

Student Name:	Sophia Stanley	Student Number:	C00299461
Working Title:	Rhythm Rangers		
Description:	A band of 3 friends are granted the powers to transform into superheroes and are told their musical powers are the key to saving the world! A 3D turn-based RPG with rhythm game elements: use a Guitar Hero controller to attack in battle. Better note hitting = stronger attack! <u>Features:</u> • Story section with in-engine, 3D cutscenes featuring low poly, rigged and animated 3D characters. Also features a 2D dialogue box with 2D visual novel style sprites for each character. • In the battle section, you play as 3 heroes: the Red, Blue, and Yellow rangers. You can either Attack (which does a basic attack that costs 0 Power), use Powered Attacks (which cost Power but deal more damage and/or other effects like buffs or debuffs), or Block (which lowers the damage and meter loss you would take from an incoming attack). Each hero has 3 stats: HP (health), Power Meter (explained below), and Speed (determines the attack order for heroes and enemies). Your enemies will typically only have HP and Speed, but if they are able to use magic, they will have their own Power Meter. • Your heroes start out transformed with a maxed out “Power Meter.” This meter allows them to stay transformed and use their more powerful magic attacks. The meter depletes when using Powered attacks and taking damage. Some enemies will also have debuffs that lower the meter. When the meter reaches 0, that hero will detransform. They will still be able to fight, but they will not have access to Powered attacks and their basic attack will be weaker. An untransformed hero will regain Power every turn and will regain more when Blocking. When their meter is maxed out, they will once again transform. • When you select an attack, a rhythm-game style section will occur. Hit the buttons on the Guitar Hero controller in time with the music to power up your attack! If you miss too many notes, your attack will fail. If you hit every note perfectly, your attack will be stronger than usual, either increasing damage or effects! • Basic Attacks will have more simple notes to hit, making them more reliable for consistent damage. Powered Attacks will have more complicated notes, providing extra challenge but much greater rewards if successful. Blocking does not require hitting notes. • There will be different types of notes depending on the attack you’re using or buffs you have received. For example, there will be a chance to

	find a green note that, when hit, will heal the hero. Certain enemies will be able to spawn “bad notes” that will hurt you or your combo if you hit them, so you should let them miss.
Reasons for selecting project:	I am a fan of Power Rangers and superhero teams in general, so I have wanted to make a story featuring my own original team. I also enjoy turn-based RPGS, and I think adding a rhythm game element is something I think will be both a challenging mechanic to make and end up with a fun game. I have not used Unity3D before but I know it is very good for game development so I wanted to get experience in using it. I want to do more 3D modelling and combined with our 3D modelling modules we will have this year, I would love to apply the skills I will learn into my project. I made a few songs for my project last semester, and I would like to make some more songs for this game.
Proposed research content:	For this project, I would like to look at “ <i>Research on the design of third-person 3D action role-playing games</i> ” by Hao-Xiang Xu et al. This research was made to apply to making an RPG using Blender and Unity3D, two programs I was already planning to use.
External links (if applicable):	Research on the design of third-person 3D action role-playing games
Hardware requirements:	Guitar Hero Controller College Computer (Linux) Personal Laptop (Windows) iPad + Apple Pencil (owned)
Software requirements:	Procreate (2D Art) Blender (3D Art) Unity3D (Game Development) GarageBand (Music)
Other requirements:
